

SavCorShield
 Jetty Pile
 Protection Systems

Series 60 – Timber/Steel/Concrete piles.

SavCorShield Series 60 is a petrolatum based system designed to protect timber piles against marine organism attack. The system stops new marine organisms attack and additionally “suffocates” existing organisms by starving them of oxygen. SavCorShield Series 60 can be applied to new or existing piles and provides unrivalled benefits for applicators and owners alike.

1. Minimum surface preparation only required.
2. Long-term design life
3. Easy to install and requires minimal amount of on machinery.
4. Low maintenance costs.
5. Extremely surface tolerant.
6. May be applied above or below the water line.

Description:

A multi-component, petrolatum-based system comprising, primer, mastic (if required), tape and flexible plastics tape outerwrap. The use of primer and mastic allows for the filling of irregular areas prior to the tape application, and eliminates potential voids. Tape application guarantees a uniform coating thickness. The tough bitumen laminate flexible plastics tape outer protects the coating from the variables of the marine environment.

SavCorShield Series 60

Suitable for sheltered thru to semi-harsh marine environments, The outer coating is secured with the unique Smartband strapping system. Increased mechanical protection can be provided by fitting a “diamond grid” HPDE mesh.
